Web Site Communication Strategy

Online Brand Objective
The NYNJTC web site represents over 95 clubs and environmental organizations in the bistate area. The current site is a conduit that represents its member’s and non-members interests and dedication to building and maintaining hiking trails and protecting related open space.

The primary objectives of the NY/NJ Trail Conference (NY/NJTC) site redesign will be to encourage expanded usage of the site by new and existing members. Based on initial assessment, a redesign of the information architecture and presentation founded on user’s modes and common tasks within the web site will be executed that will strive to improve overall flow, ease of use and efficiency. The redesign will incorporate and reflect any new branding/marketing efforts as well as supporting the existing brand positioning and mission of the organization.

Site Goals & Objectives
• Improve the overall ease of use and functionality through an intuitively organized Interface.
• Ensure the (NY/NJTC) utilizes Internet “Best Practices.”
• Create an updated online presence that delivers on the brand positioning, not only through the communications, but through the user experience.
• Provide an authoritative, differentiated channel within the region.
• Be true to (NY/NJTC) personality and organization’s value’s.
• Be meaningful and credible to all of (NY/NJTC) audiences.
• Incorporate suggestions and recommendations from the site analytics and user feedback (if appropriate)
• Provide a flexible structure that is supported by the Content Management system. (TBD)
• Provide scalability for future service/feature enhancements.
• Provide a site assessment document, styleguide and guidelines which assure that consistent functionality and ease of use can be incorporated by anyone who is responsible for expanding the site at later dates.

Current Constituent Belief
(Collaborative team/organization effort)
TBD.

Desired Constituent Belief
(Collaborative team/organization effort) (Draft version)
(New Member)
Even though I may be new to (NY/NJTC), I already feel right at home and totally conformable using the site. I can quickly locate hiking trails in my area, purchase maps and books in the Hiker’s marketplace, view volunteer opportunities, locate topics and learn about issues that are important to me. I can even help make a difference by donating directly online and sign up for newsletters and publications.

(Existing Member)
The site feels as if it’s gotten easier and somehow better. I instantly know where I’m going and how to locate it. When I’m trying to carry out a task such as purchasing trail maps, I don’t question whether I’m doing the right thing. I just do it. Period. And when I’m done, I immediately feel confident knowing that I’ve accomplished what I set out to do.

Target Audience
- (primary) members (existing) (50%)
- (secondary) non-members (new) (50%)

Organization Brand Promise (specific brand promise may be updated)
The cornerstones of the organizations’ mission statement are:
• Developing, building, and maintaining hiking trails.
• Protecting hiking trail lands through support and advocacy.
• Educating the public in the responsible use of trails and the natural environment

Online Brand Objective
Not only make the promise embodied in the mission statement, but deliver on it through the website information architecture:
• Establish the (NYNJTC) site as the leading resource in the region that reflects the needs of its members and surrounding communities by allowing users to learn, share, support, advocate and get involved in the organizations efforts in an easy, secure and reliable way.

Using the three mission objectives as the core, the site can provide a multitude of services and areas that go far beyond the basics of information services. Since user modes are always in flux, A user can be in a passive information gathering mode, then quickly switch gears to a purchase mode, at any given time. We can achieve a user experience that addresses this dynamic, and provide an efficient, flexible way for users to access services and information.

The current site offerings have expanded to included creating a community and strengthening relationships by promoting the benefits of membership and enrollment, and offering several ways for members and non-members to express their support for the organization through donations, online purchases, volunteering and advocacy programs.

Interactive History Timeline

Question?
Is there a requirement to differentiate site experience based on members/non-members in the presentation of information?
Framework
Underlying organizing structure for Information Architecture.
Simply by aggregating content into focused areas can help fulfill
the organization's brand promise and mission objectives.

Educating the public in the responsible use
of trails and the natural environment

Developing, building, and maintaining hiking trails.

Protecting hiking trail lands through support and advocacy.
Universal User Modes

All users progress through different stages depending on what they want to do. This can best be described as a mode or mindset. By tapping into these universal user modes, the site can also help organize content and accessibility. Modes are not constant. A user can quickly shift gears back and forth from learning to purchasing once a decision is made. Enabling access across these universal modes are a critical component to delivering on a positive user experience. If they can quickly and efficiently accomplish a task, they most likely have had a positive experience.

The difference between status of a new or existing member is primarily how familiar they are with the site. Regardless of status, the organization of content across user modes provides an intuitive way for users to access content quickly and efficiently.
**Hypothetical Information Architecture (To Be discussed)**

If we were to overlay the brand objectives with the user modes, we naturally start to see how easily an Information Architecture can reinforce the organization's mission and deliver on it through the web site experience.

As an example, the third column illustrates some of the task-specific functions that are represented in each of the user modes. All tasks fall under one or several modes. These are only examples and do not represent all of the tasks that can be accomplished within the site.

- Option for filter Level (1) and Sub Levels (2-3)
Screen Template Hierarchy
The level of depth that the site can be developed should be no more than 2-3 clicks away.
By implementing a system of filter or segmentation pages, we can allow users to drill deeper into the site.
On some rare occasions, an additional level can be added. By organizing templates in this manner,
we can provide a structure that is supportive of a content management system if it is deemed
necessary to implement.
Level 0 Template

Color Mapping

The Level 0 screen illustrates how a consistent display can be achieved for related content and its position on the screen. Basically represents a separation of the global focus or highlight areas. As the content and features are added, the page complexity is decreased through appropriate organization of related content. The color mapping on this screen and the following screens illustrate the consistency of the content relationships and how they are represented on sub-levels within the site.

Production

These templates will also provide a consistent architecture for dynamic content in a content management system. Areas can easily be separated and included within the templates across all levels. A five column grid has been used for these purposes to provide a structure for hypothetical tables, columns, and rows. All of this should be considered in the actual production of the templates within the site.

Grid structure for table set up based on 5 columns.
Level 1 Filter Template_option A

Color Mapping

The Level 1 screen starts to illustrate how a consistent display can be achieved for related content and its position on the screen. These are all hypothetical placements and labels for content represented here. Actual content and labeling is to be defined through collaboration.

Grid structure for table set up based on 5 columns.
Level 0 Template
Hypothetical Information Architecture for the entry screen.

This does not represent any finite creative, design, labeling or element positioning. It is to be used solely as a way to help illustrate features and elements and content in relation to the color mapping we have previously viewed. This is all open for discussion. Further development and definition of elements and features on a screen by screen basis will be undertaken.

The labeling of primary navigation is clear, action-oriented and user-centric in the context of a user mode. Hiker’s Marketplace could be labeled “Get Merchandise” or “Go Shopping.”

The idea here is to provide an organization of content into related groups and suggested positioning and placement. We’ve also highlighted primary sections and lifted 2-3 items from each area to provide a quick understanding of that area and quick access to popular features within each one. These can change often.

Obviously the organization’s business and mission objectives are presented in a user-centric way by highlighting revenue-driving features and providing awareness for issues important to the organization’s members.

Grid structure for table set up based on 5 columns.
Level 1 Filter Template_option B

Color Mapping
The Level 1 screen starts to illustrate how a consistent display can be achieved for related content and its position on the screen. Basically represents a separation of the global focus or highlight areas.

These are all hypothetical placements and labels for content represented here. Actual content and labeling is to be defined through collaboration.
Level 2-3 Content Template

Color Mapping
Illustrate how a consistent display can be achieved for related content and its position on the screen. Basically represents a separation of the global focus or highlight areas.

These are all hypothetical placements and labels for content represented here. Actual content and labeling is to be defined through collaboration.

Grid structure for table set up based on 5 columns.
Global (Trail) Locator Menu

Naturally meets an expectation amongst users that there as a short-cut feature that can take them directly to a specific task. This can eliminate the lengthy text links that are difficult for some users to sift through.

Popular tasks can be organized in a user-centric manner. As additional user feedback, popular issues arise or site analytics suggest, the short-cut menu can be changed quickly and easily. This can add to the speed and ultimately the satisfaction of users who are able to quickly jump or short-cut to a section of the site effortlessly. Conceptually this lends itself to the target audience and could be a very useful feature down the road.

Labeling and description to be determined.

Looking for....
- How do I make a donation?
- How do I become a member?
- Download the annual report etc.....

These are just a few quick examples. The list should be no more than 12-15 popular tasks.

A full list of tasks can be developed through collaboration and research.
